

Hello, it's me **Calvin Anacia Suciawan.**

Mobile Application and Technology

Welcome to my portfolio, I'm currently a student at BINUS University. I usually work on UI/UX designs and mobile applications development mostly Androids. This portfolio showcases documentation of the best projects I've done so far as a mobile developer student.

FootLockRE is a Human Computer Interaction laboratory final project where I'm required to create a website design with **Figma** and building it using pure **HTML**, **CSS**, and **JavaScript**. Not just the front-end, this project also handled the **subscription system** using JavaScript. Most of the graphics edit including the video editing and logo was self created. Even though some of the edits took third party source from other websites and creators.

The website features **5 different pages** with its own purpose. Designed with **8 golden rules** to fulfil user needs in UX. Also the UI was designed to please the eyes of users. Don't worry, the website supports **responsive screen size**.

DOCUMENTATION

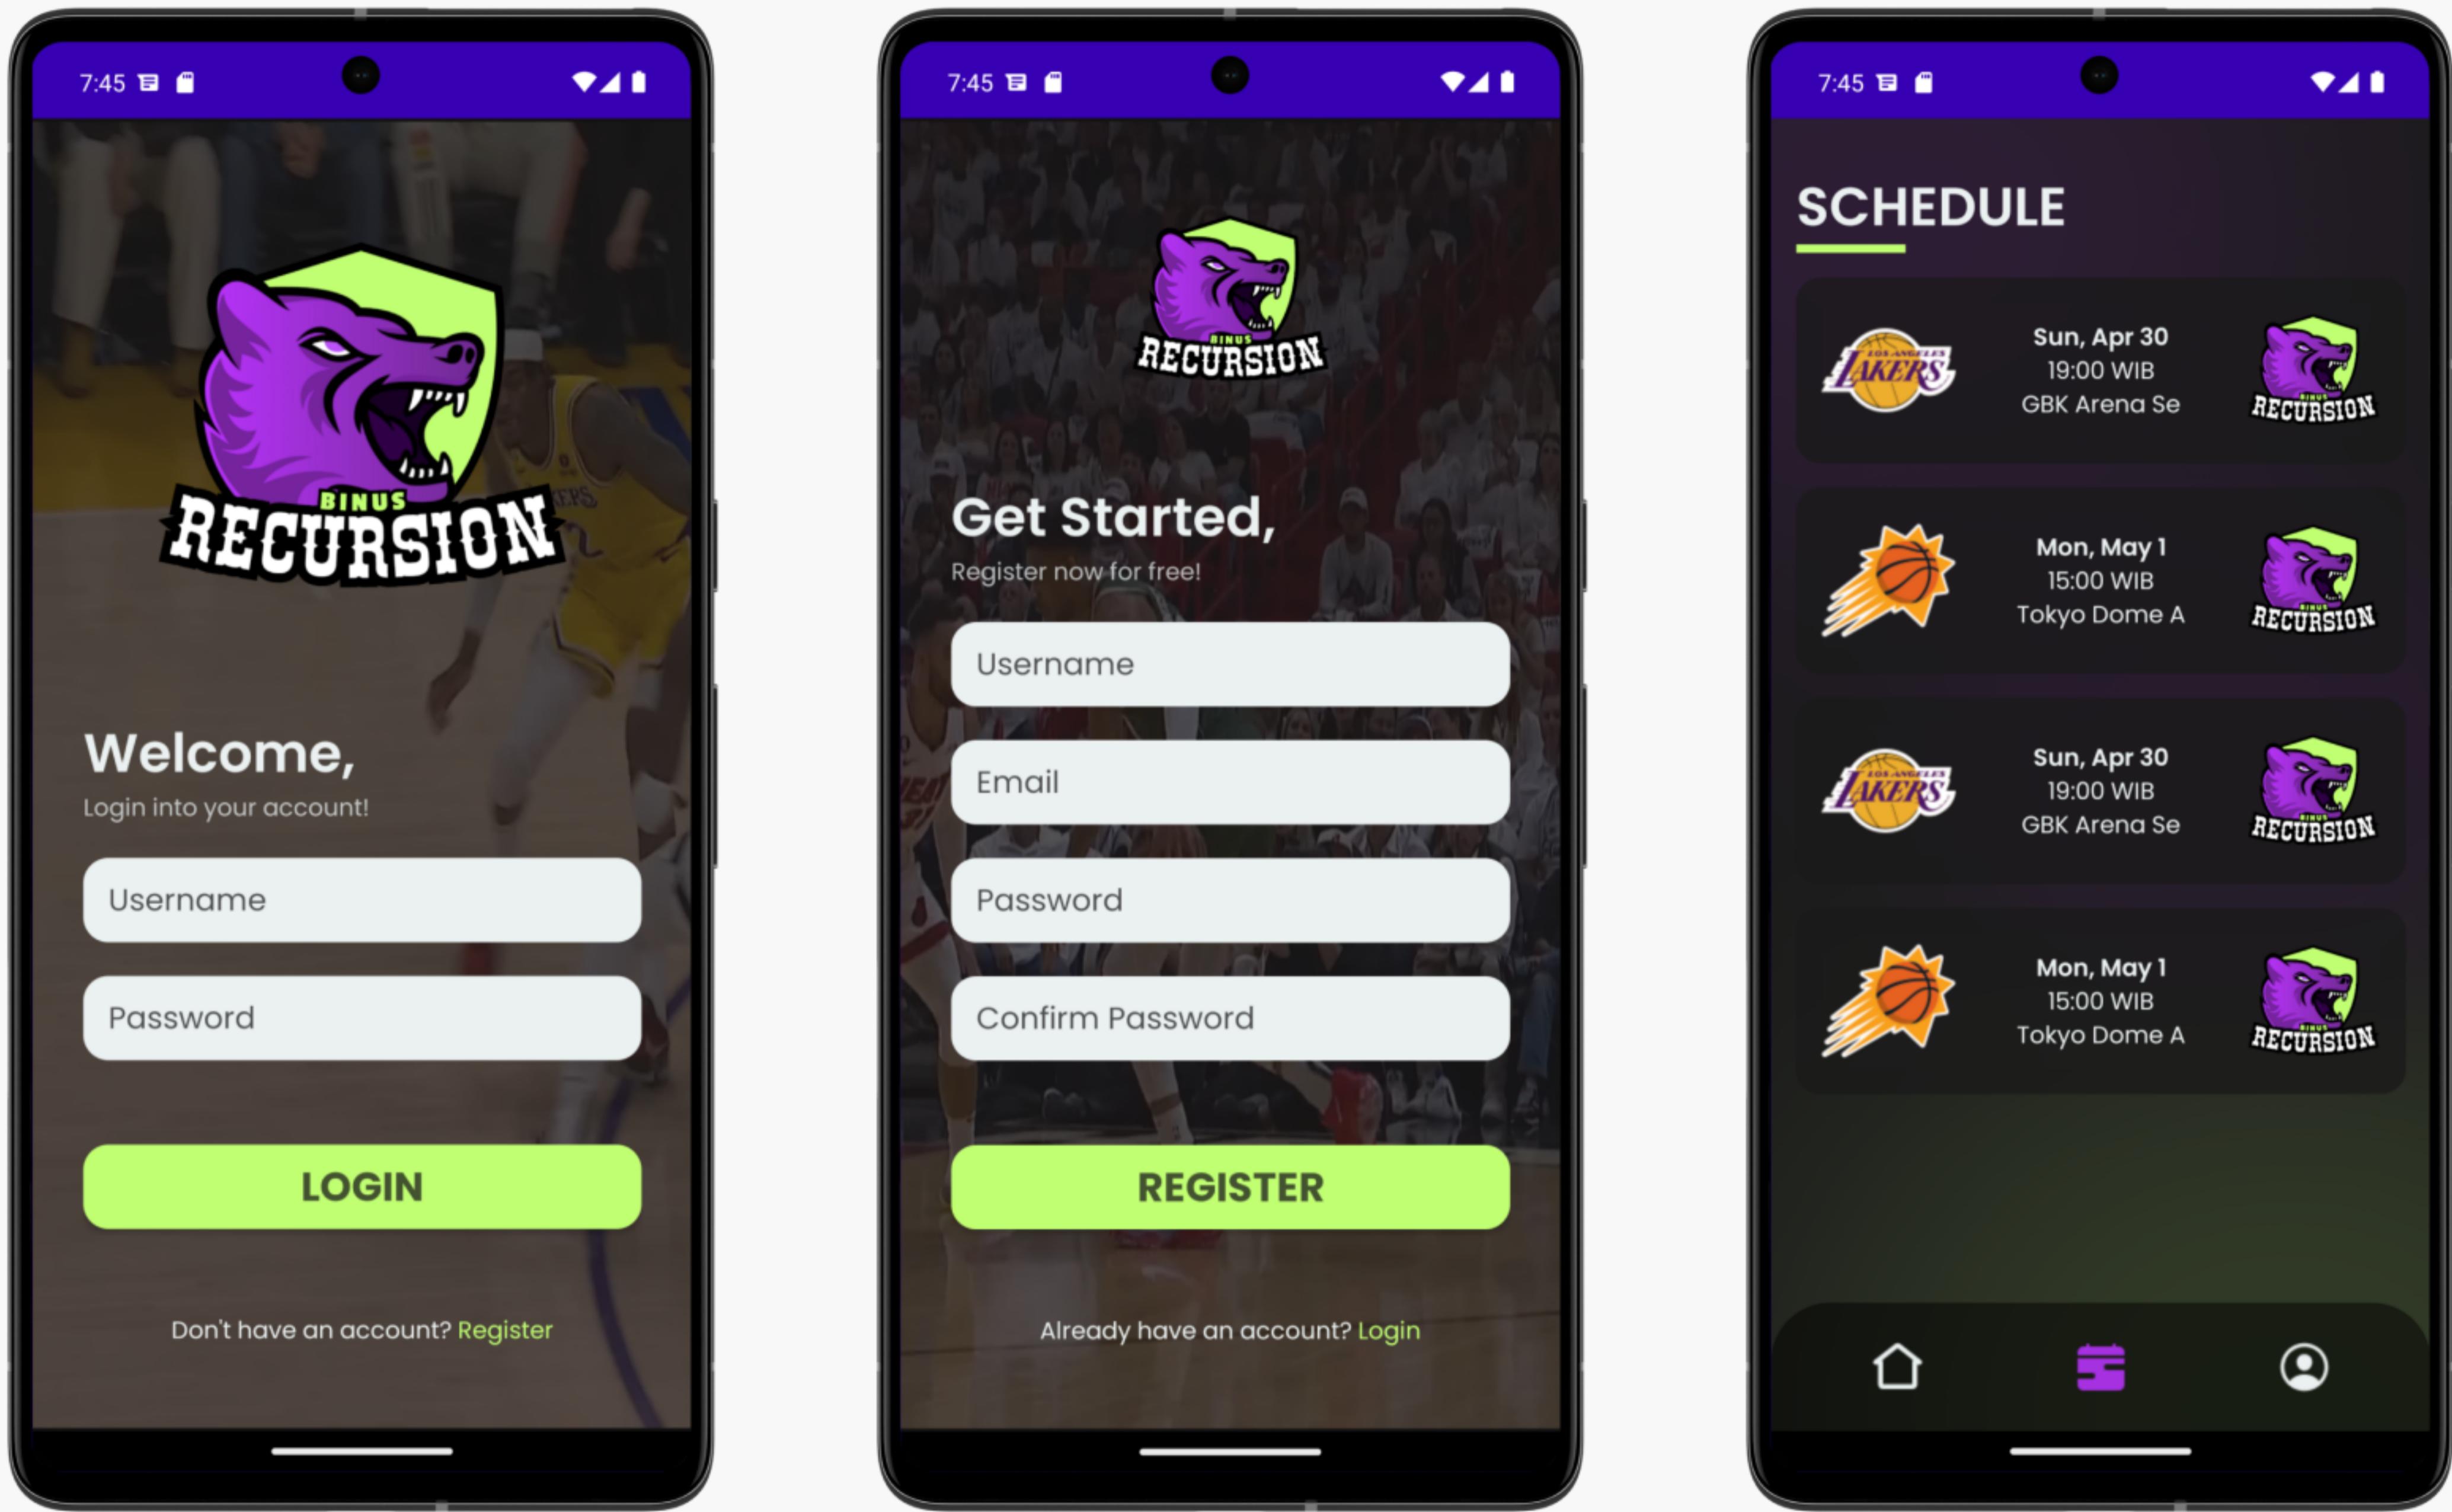

[https://github.com/Nucizz/
recursionteam](https://github.com/Nucizz/recursionteam)

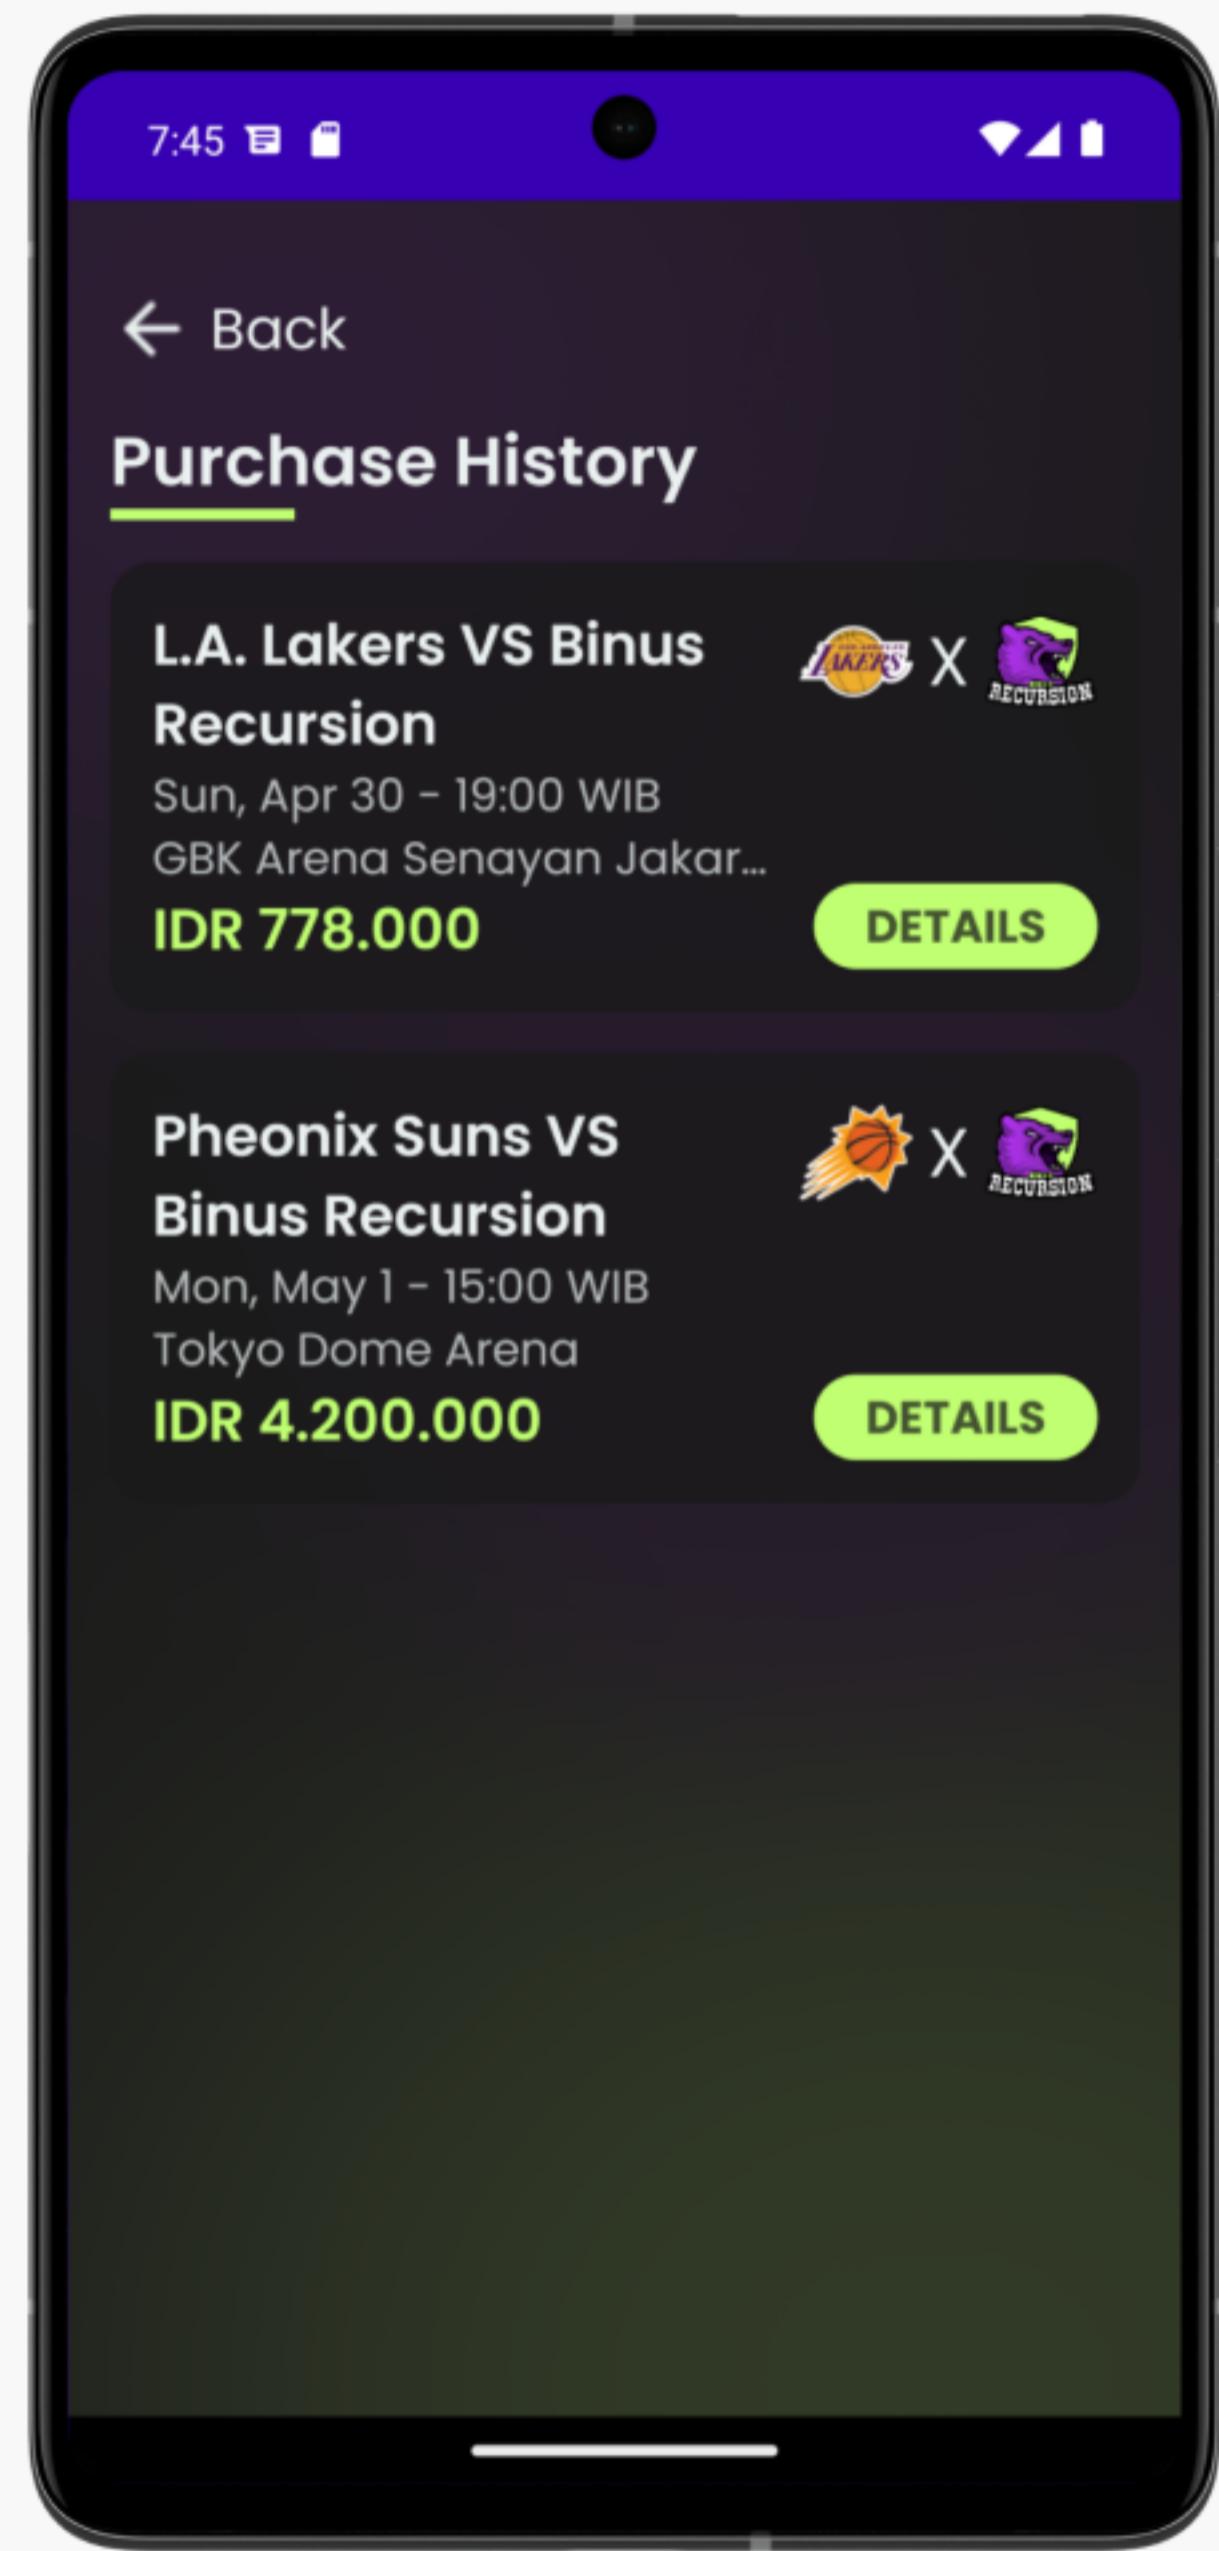

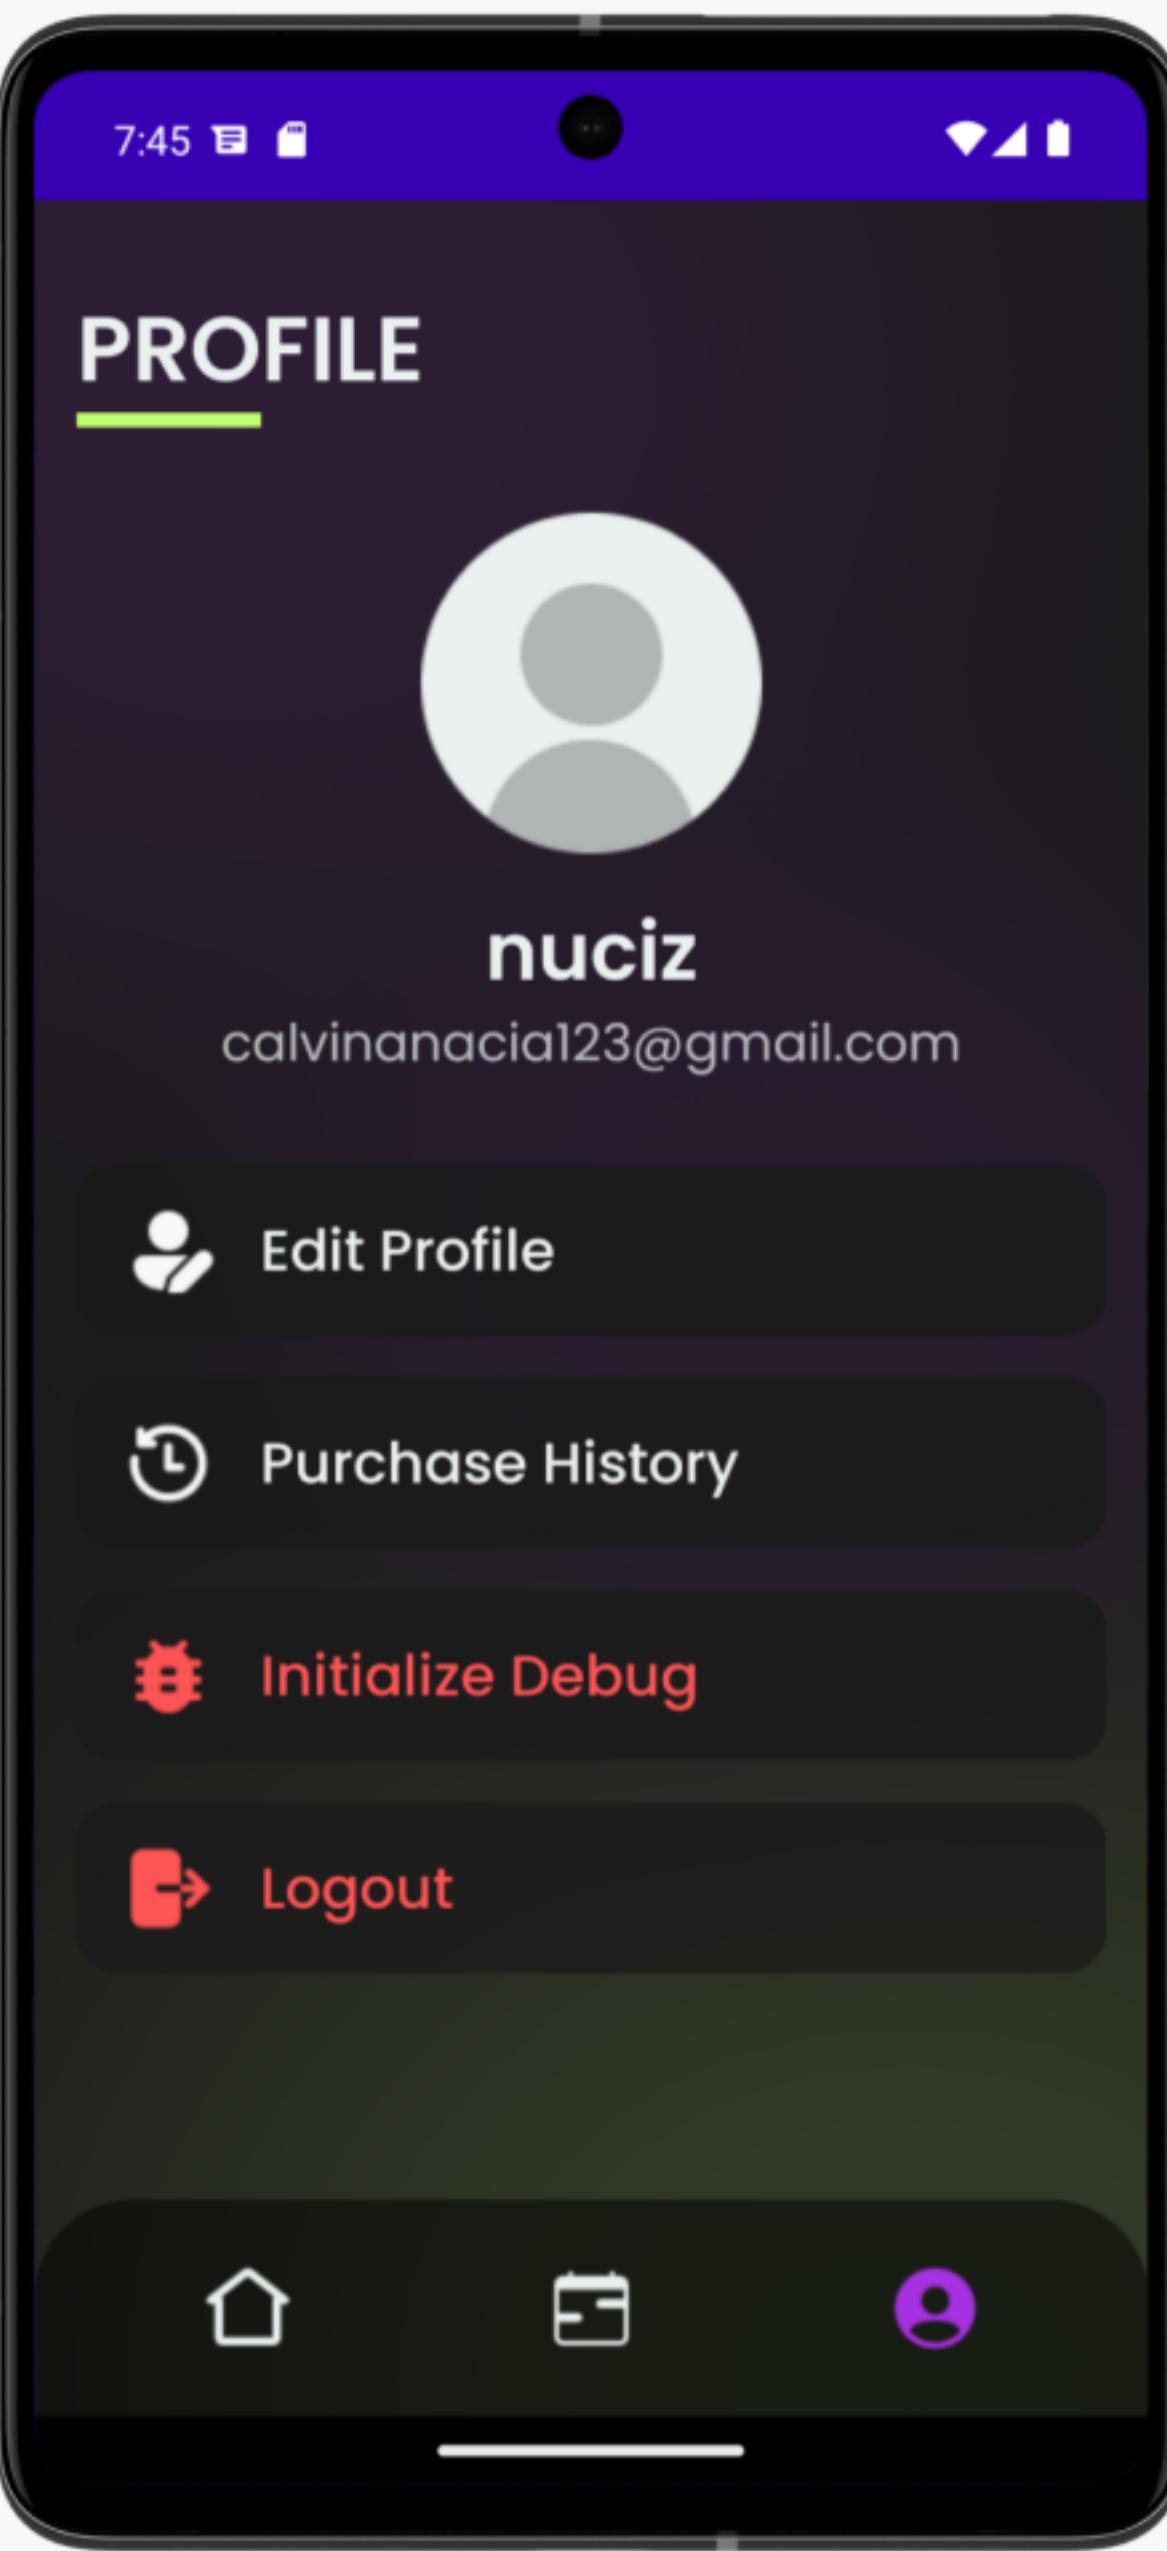

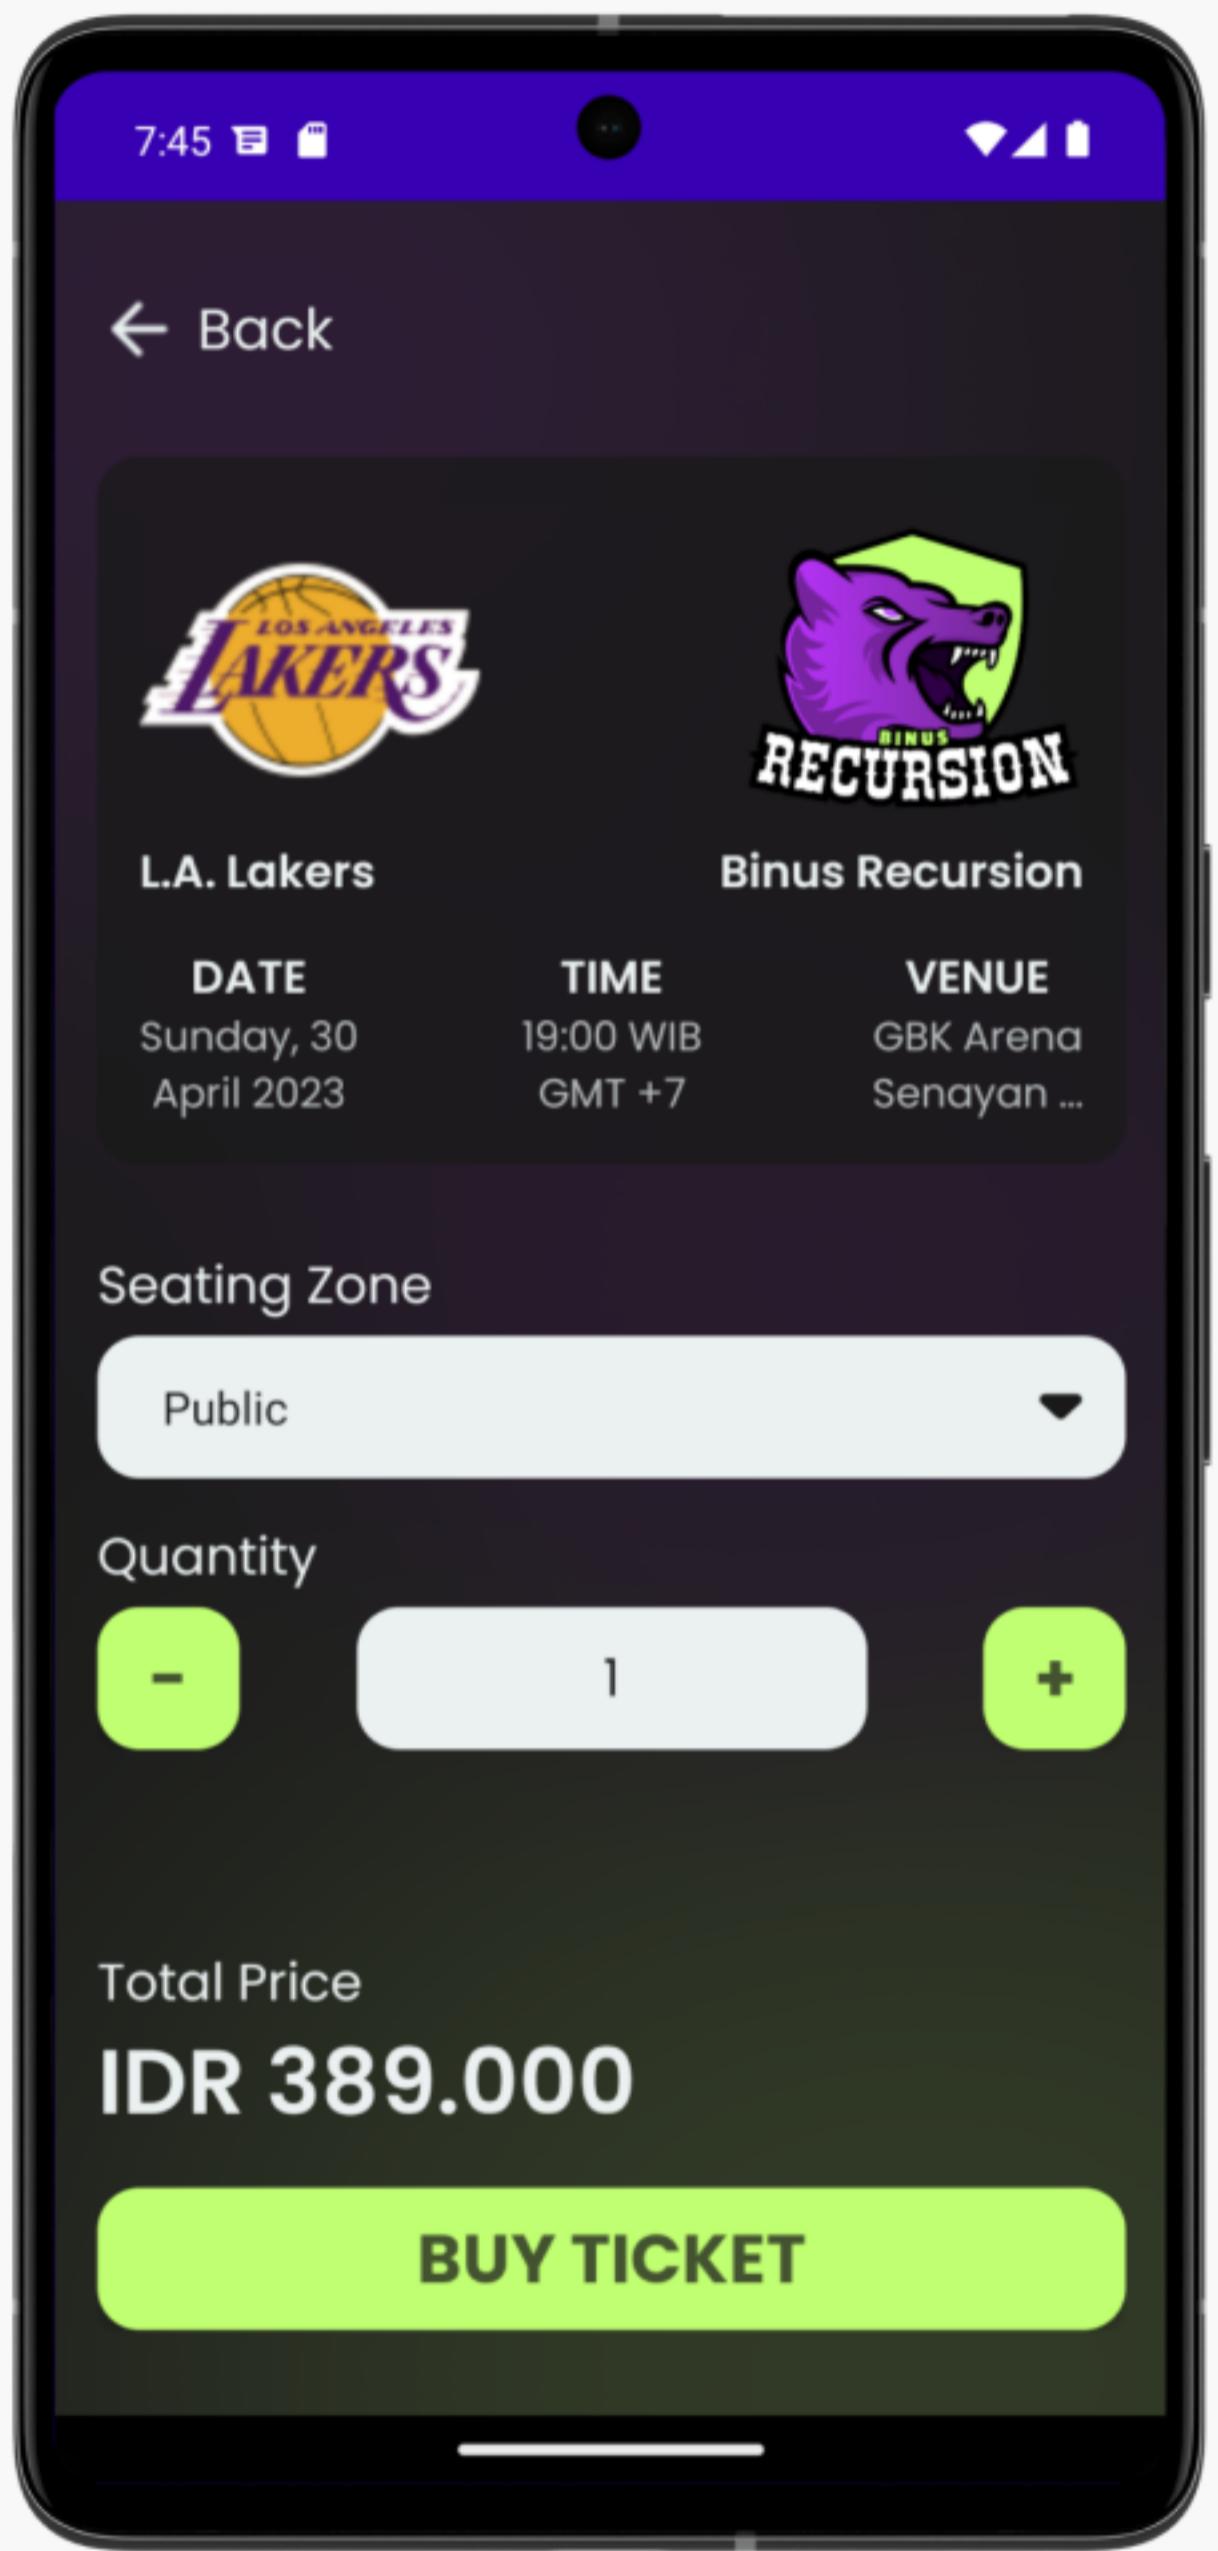

BINUS Recursion Fans App is an exam project created within 4 days for the Mobile Community Solution course. I'm required to create an **Android application** that serves information to a sport team fans about their schedule, article, and match ticketing. So I picked the name **BINUS Recursion** for the team and created the logo using Canva.

The application itself only features a local saving using **SQLite** since we were learning about it in the course and required to fully apply it to the application. I also added some catchy features like **barcode generator** from ticket code. All of that were coded in **Android Studio** using **Java** with Android **API 33**.

HEFish Article App

TYPE

DOCUMENTATION

https://github.com/Nucizz/hefish_finalproject/

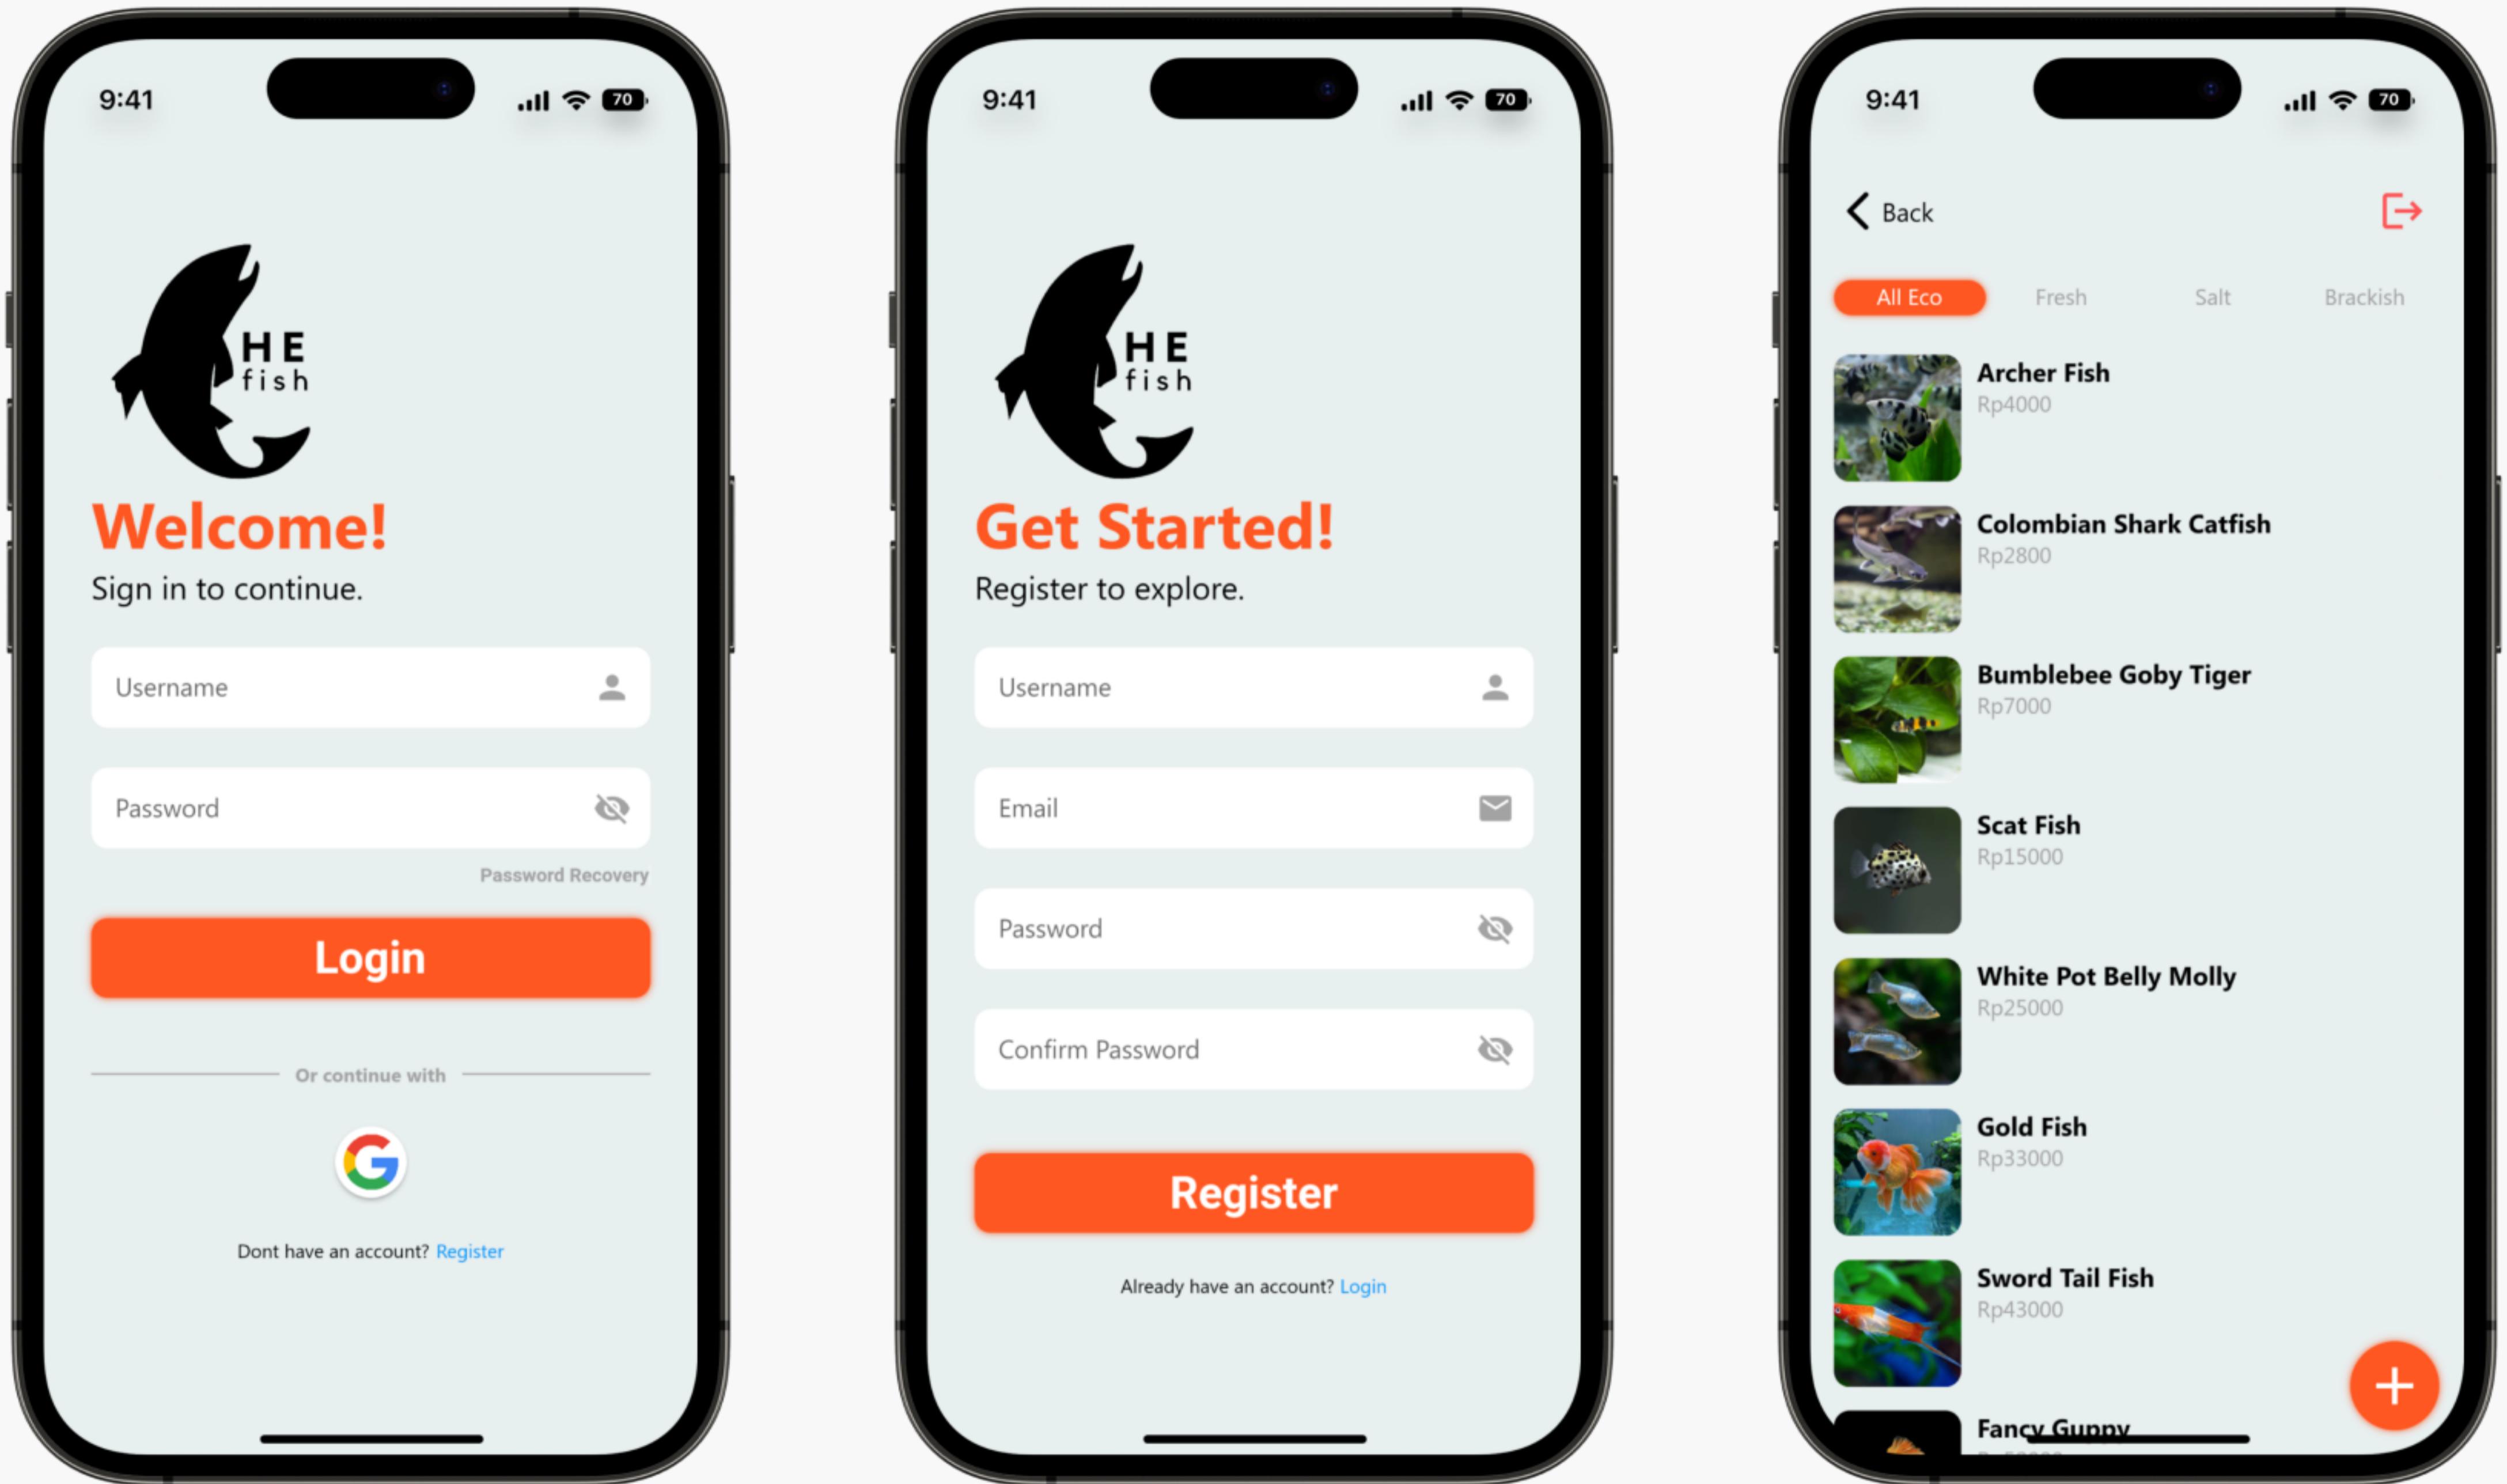

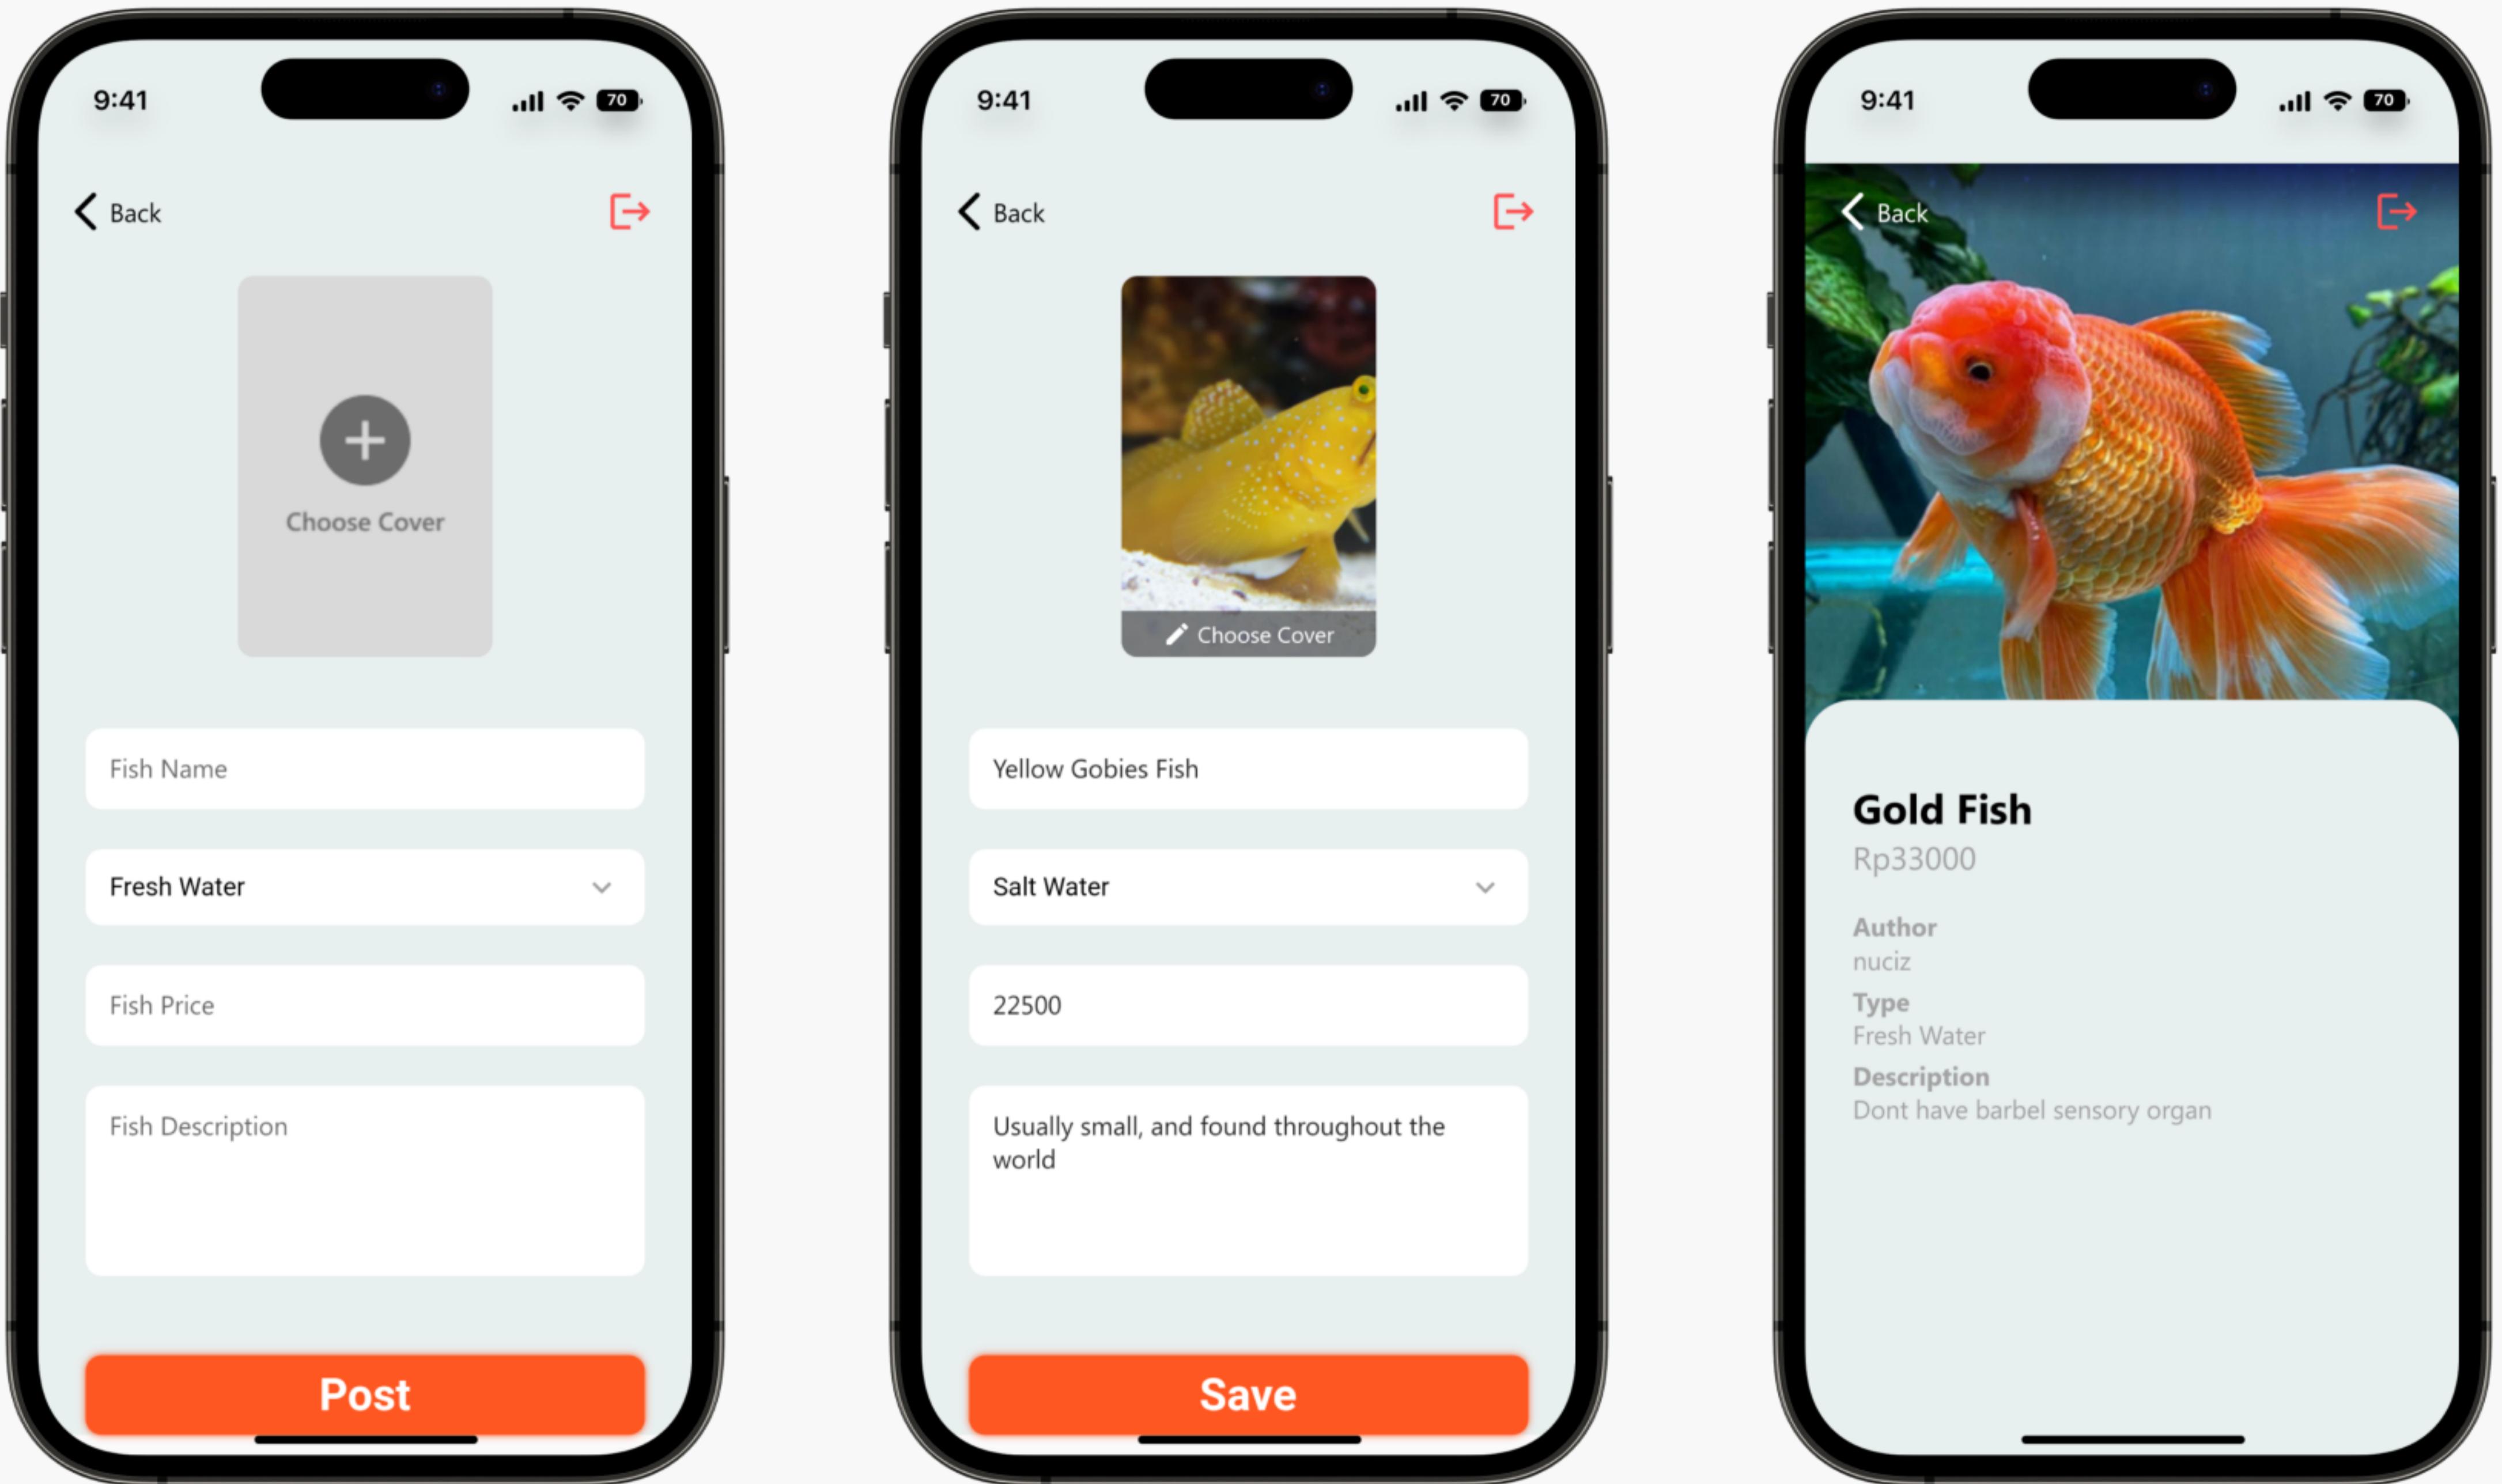

HEFish is a Mobile Cloud Computing laboratory final project where we're required to create an application that lists fish articles filtered by its type. The project was made using **Flutter** for front-end and **Express.js** combined with **MySQL** for the back-end.

The application itself features cloud server database that serves articles and user accounts. It also has a Google console API which is **Google Authentication**.

DOCUMENTATION

https://github.com/Nucizz/metrobaru_oms/tree/main/MB_FE

Metro Baru OMS (Order Management System) App is a Mobile Cloud Computing final project where we're required to create any application using **Flutter**. We decided to create Metro Baru OMS for a dedication to one of our team member's parent who owns a restaurant in Jambi City.

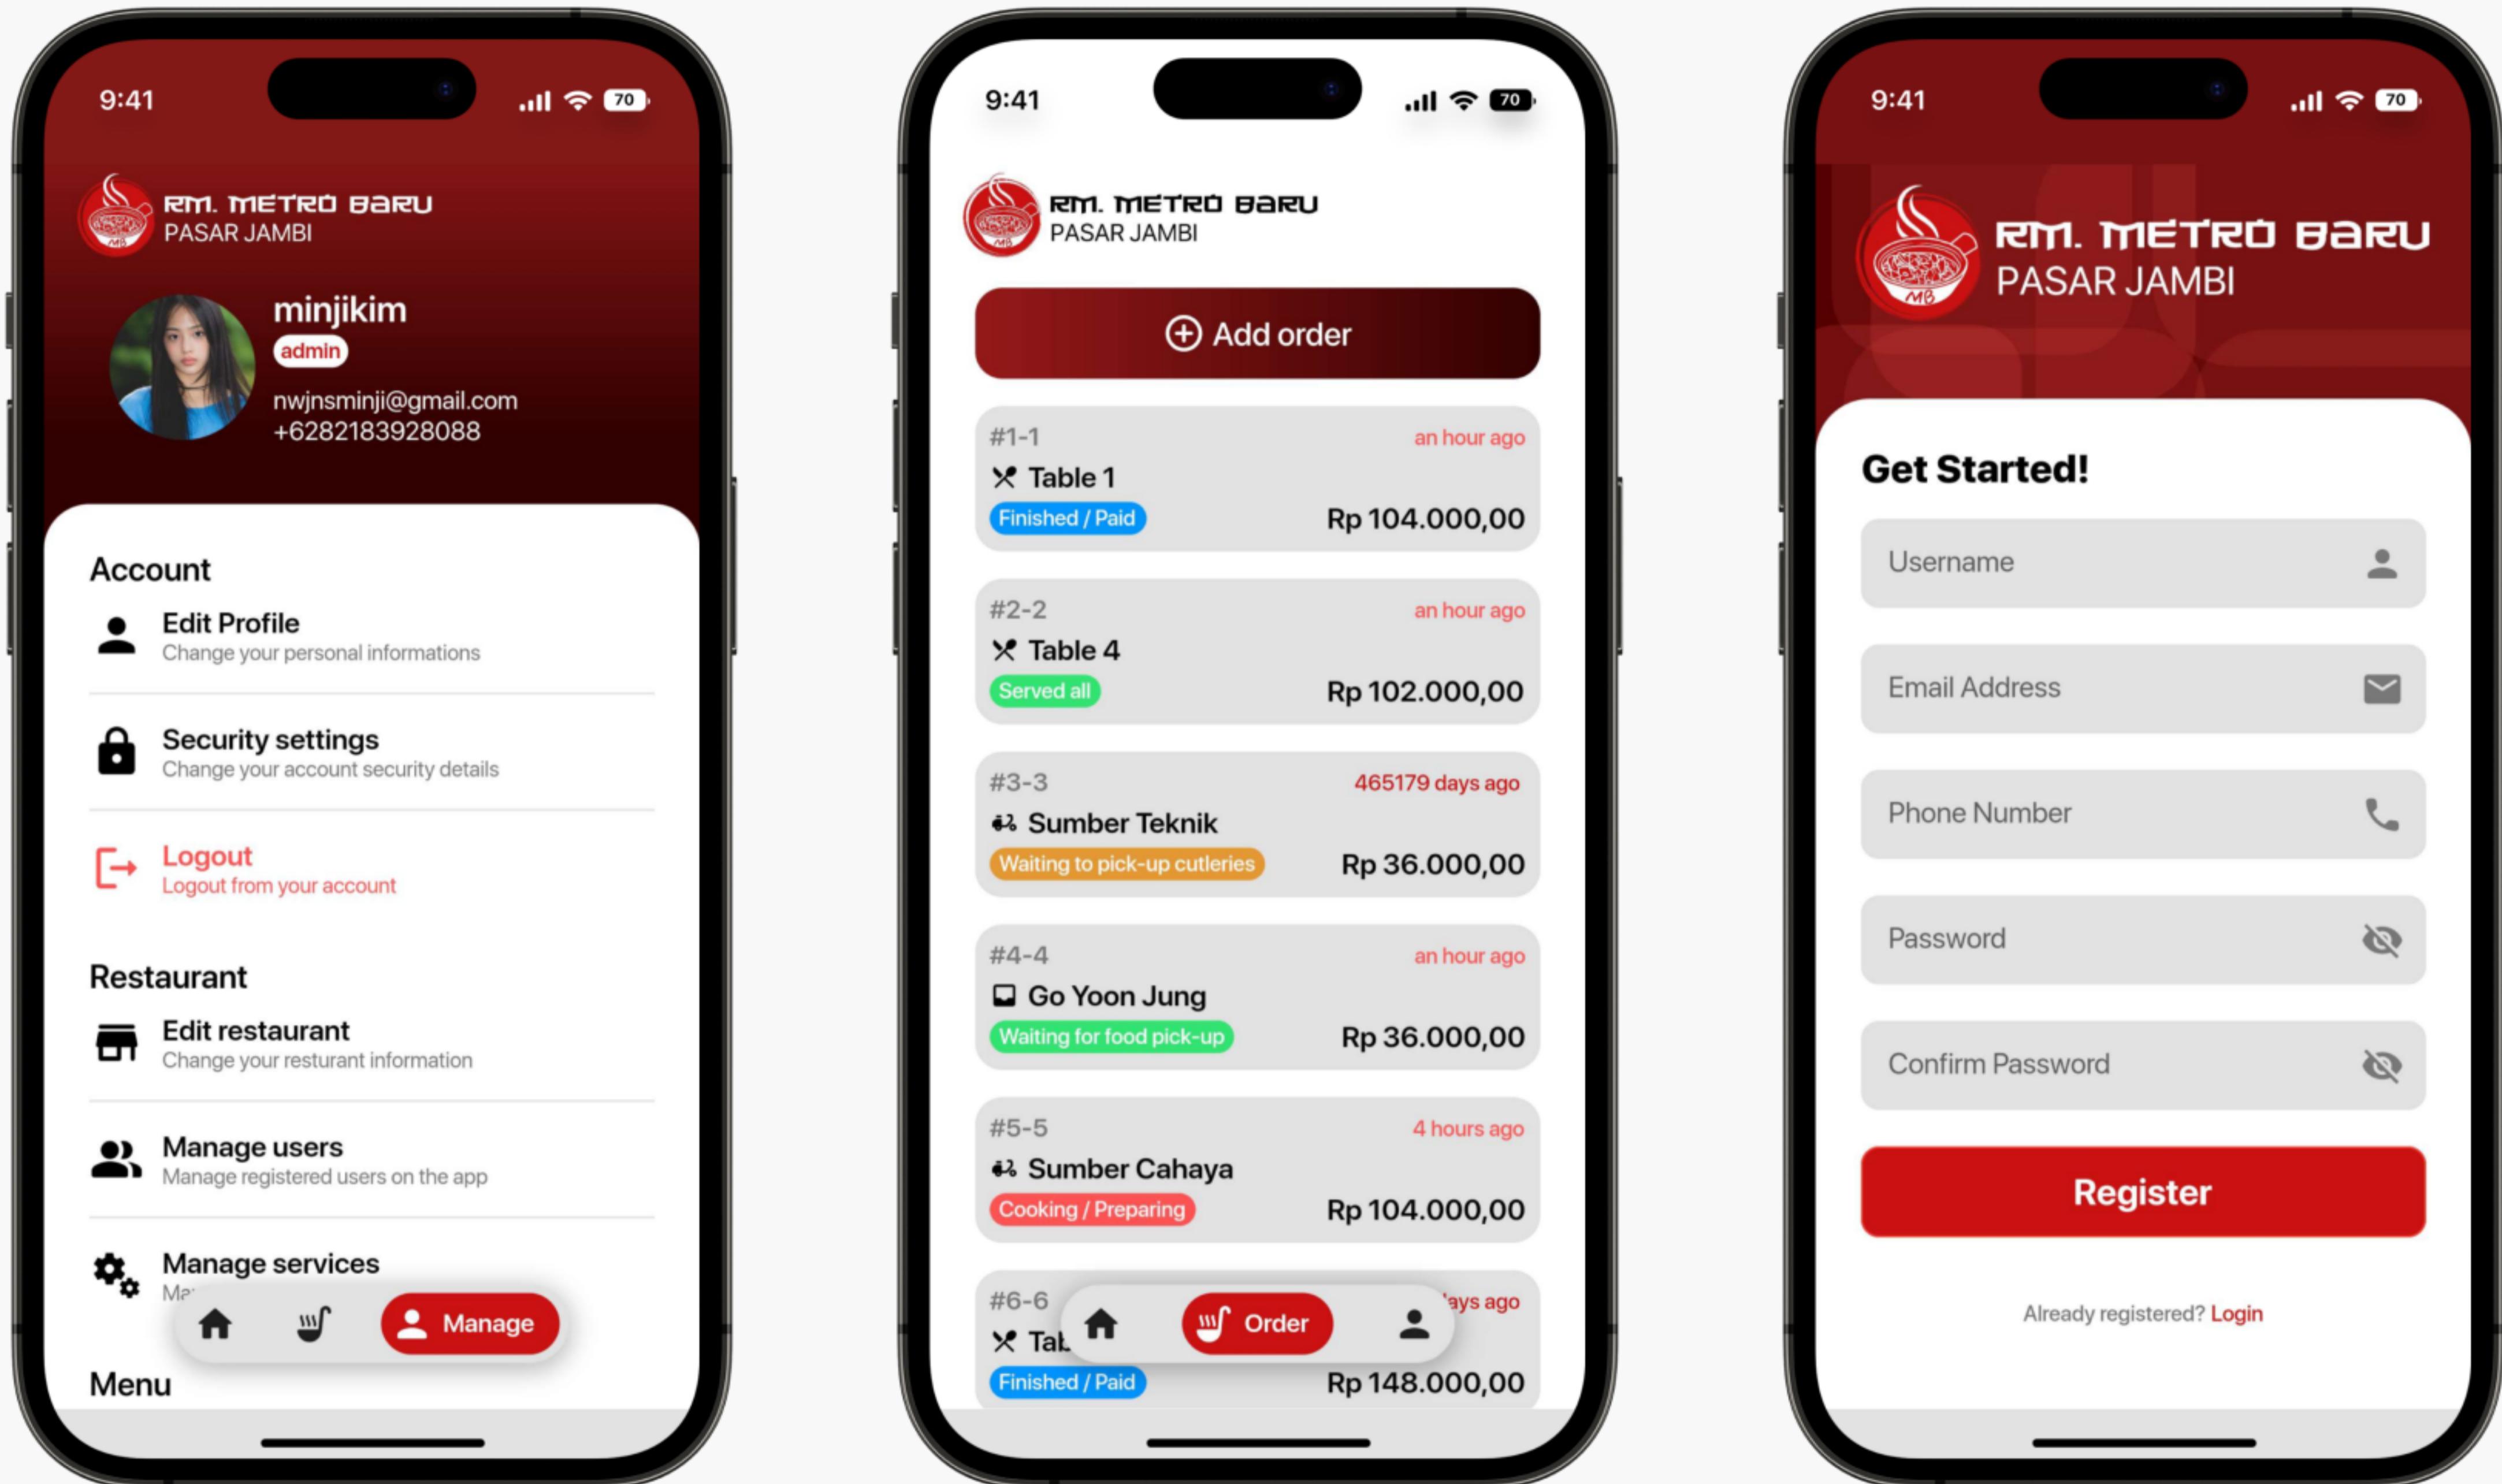

The application is not completed yet since it has no **Back-end**, but all of the logical calculation in order system has been done in **Dart** (Flutter base programming language).

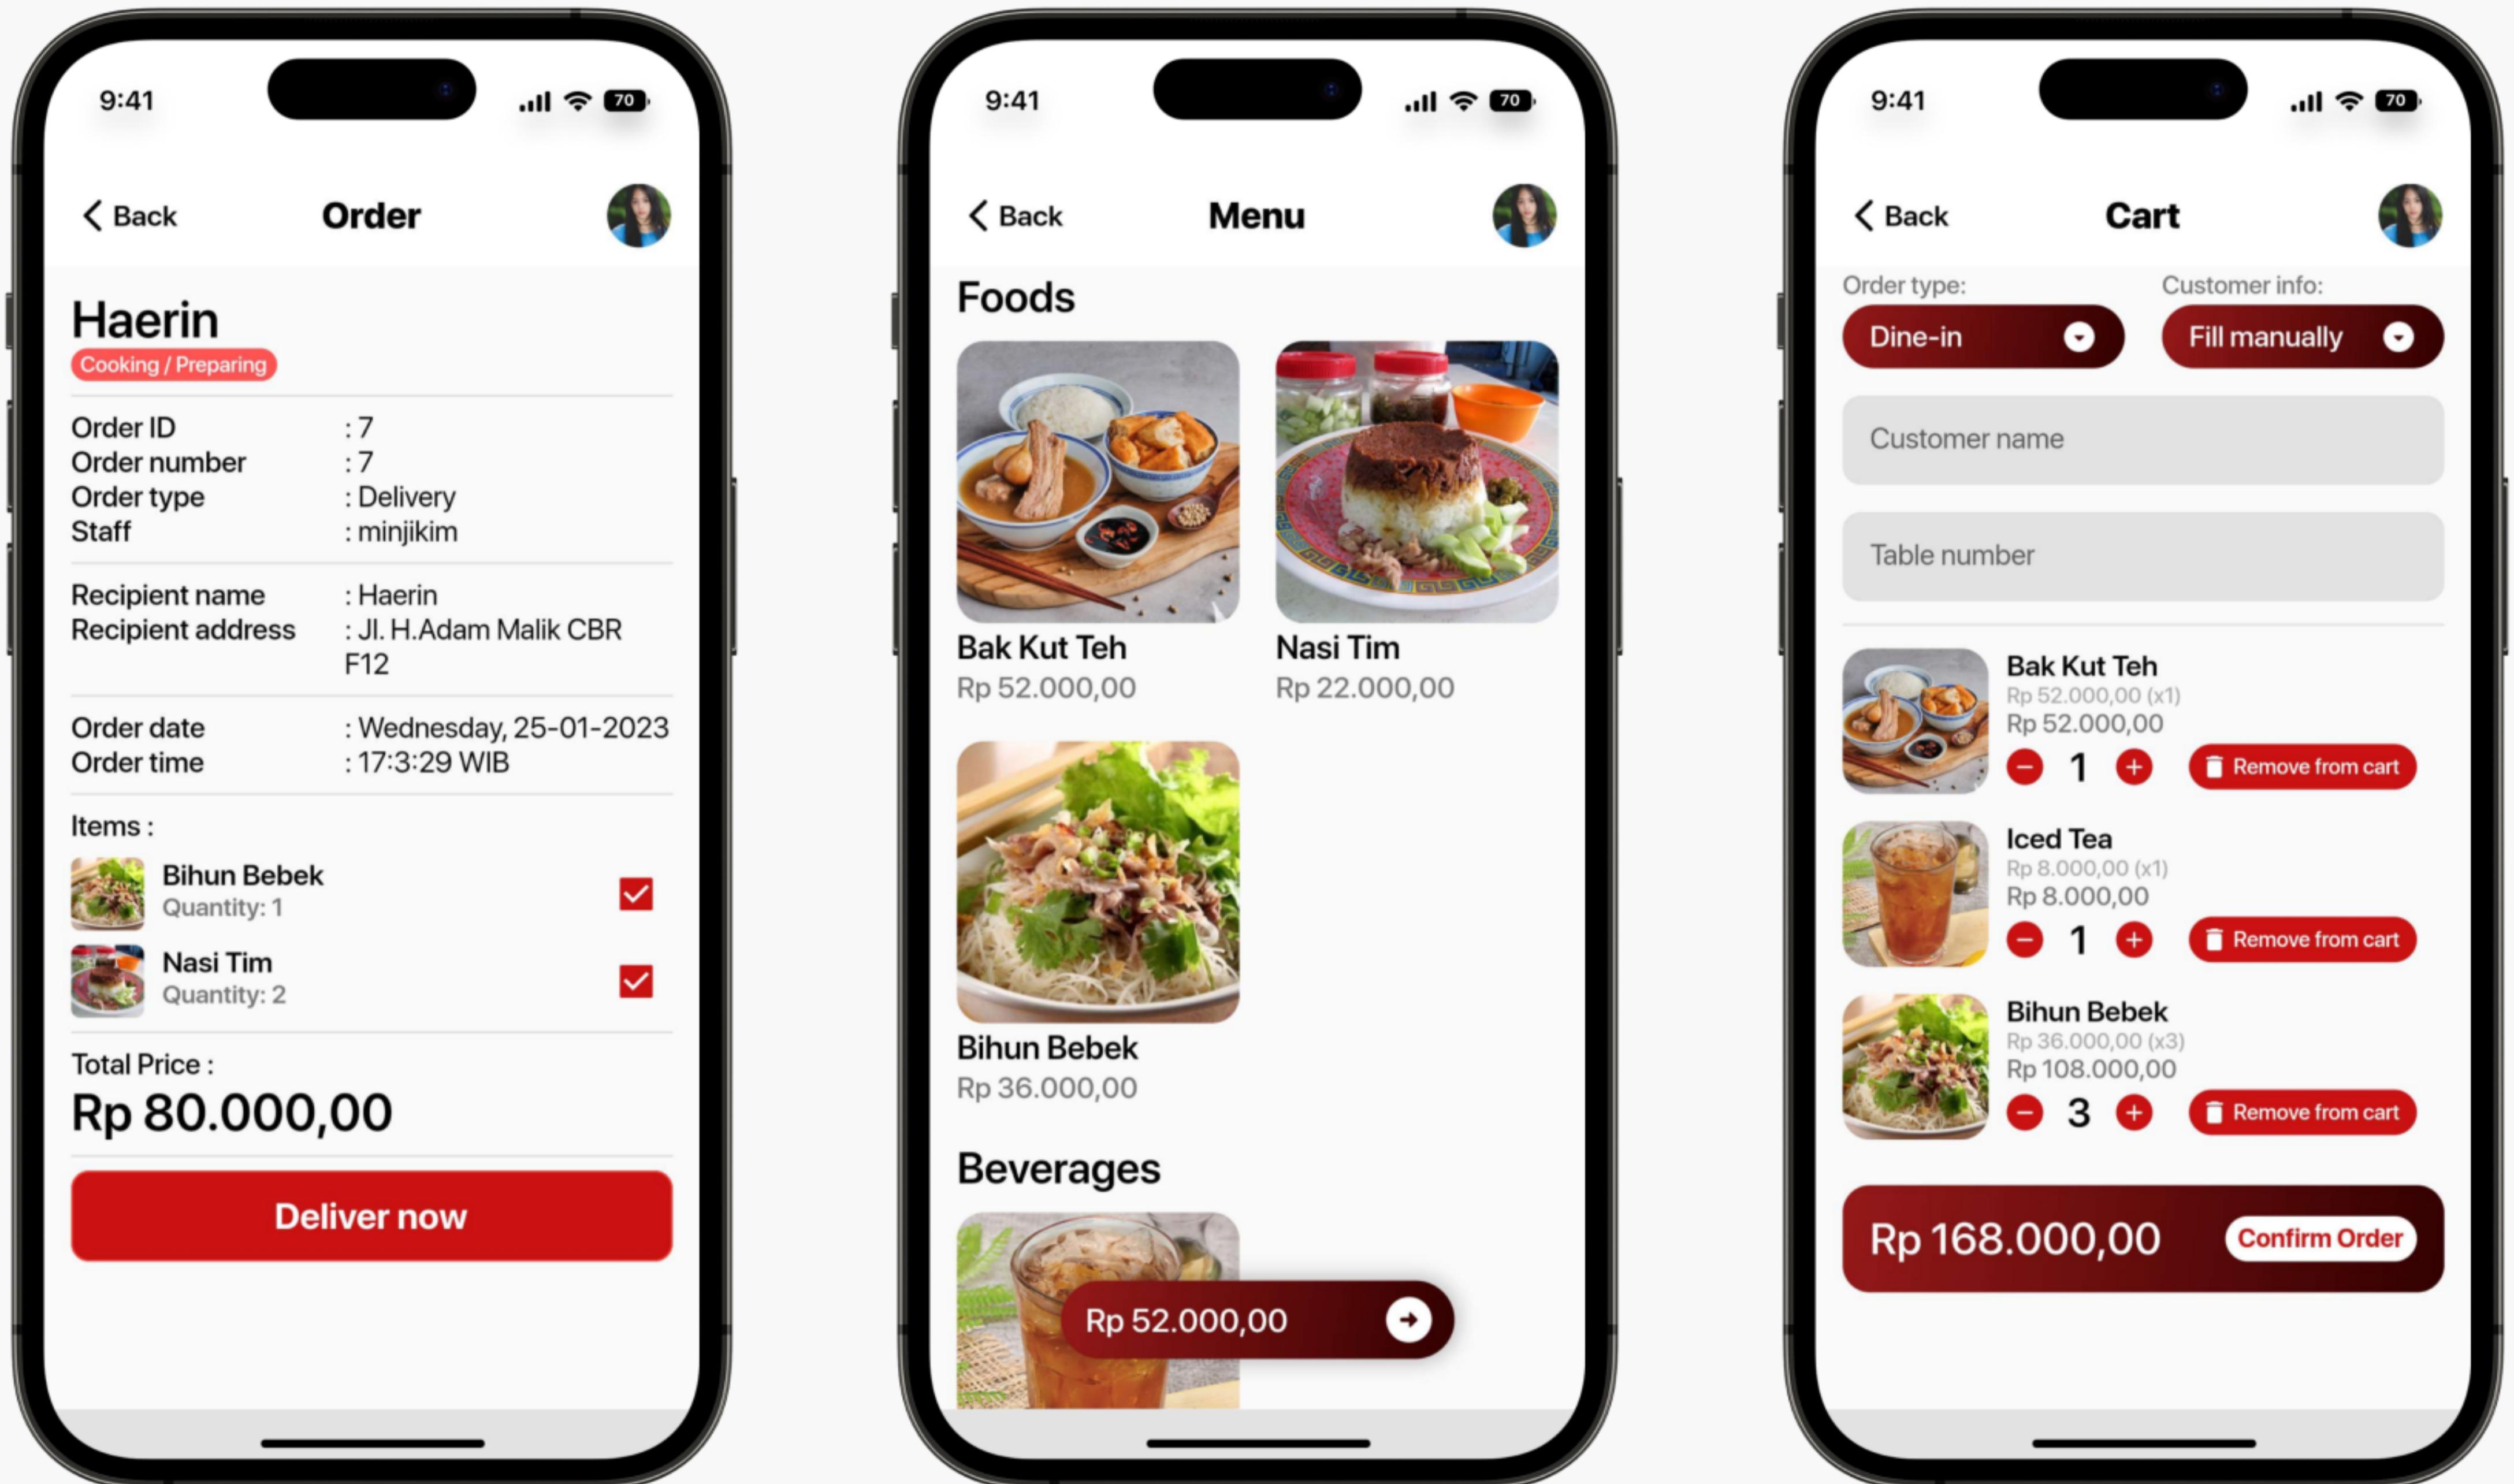

Features of this application are created to **help manage orders** that are usually forgotten and **protects from human errors** like wrong calculations and more. Admins can add and customize orders, calculate its price live, update its status like cooking, served, delivered, and paid.

<https://github.com/Nucizz/bluejackpharmacyassignment>

BLUEJACK PHARMACY

Bluejack Pharmacy App is a Mobile Community Solution assignment where I'm required to create an application for Bluejack Pharmacy Customers so they can order and get information about their order just from their phone.

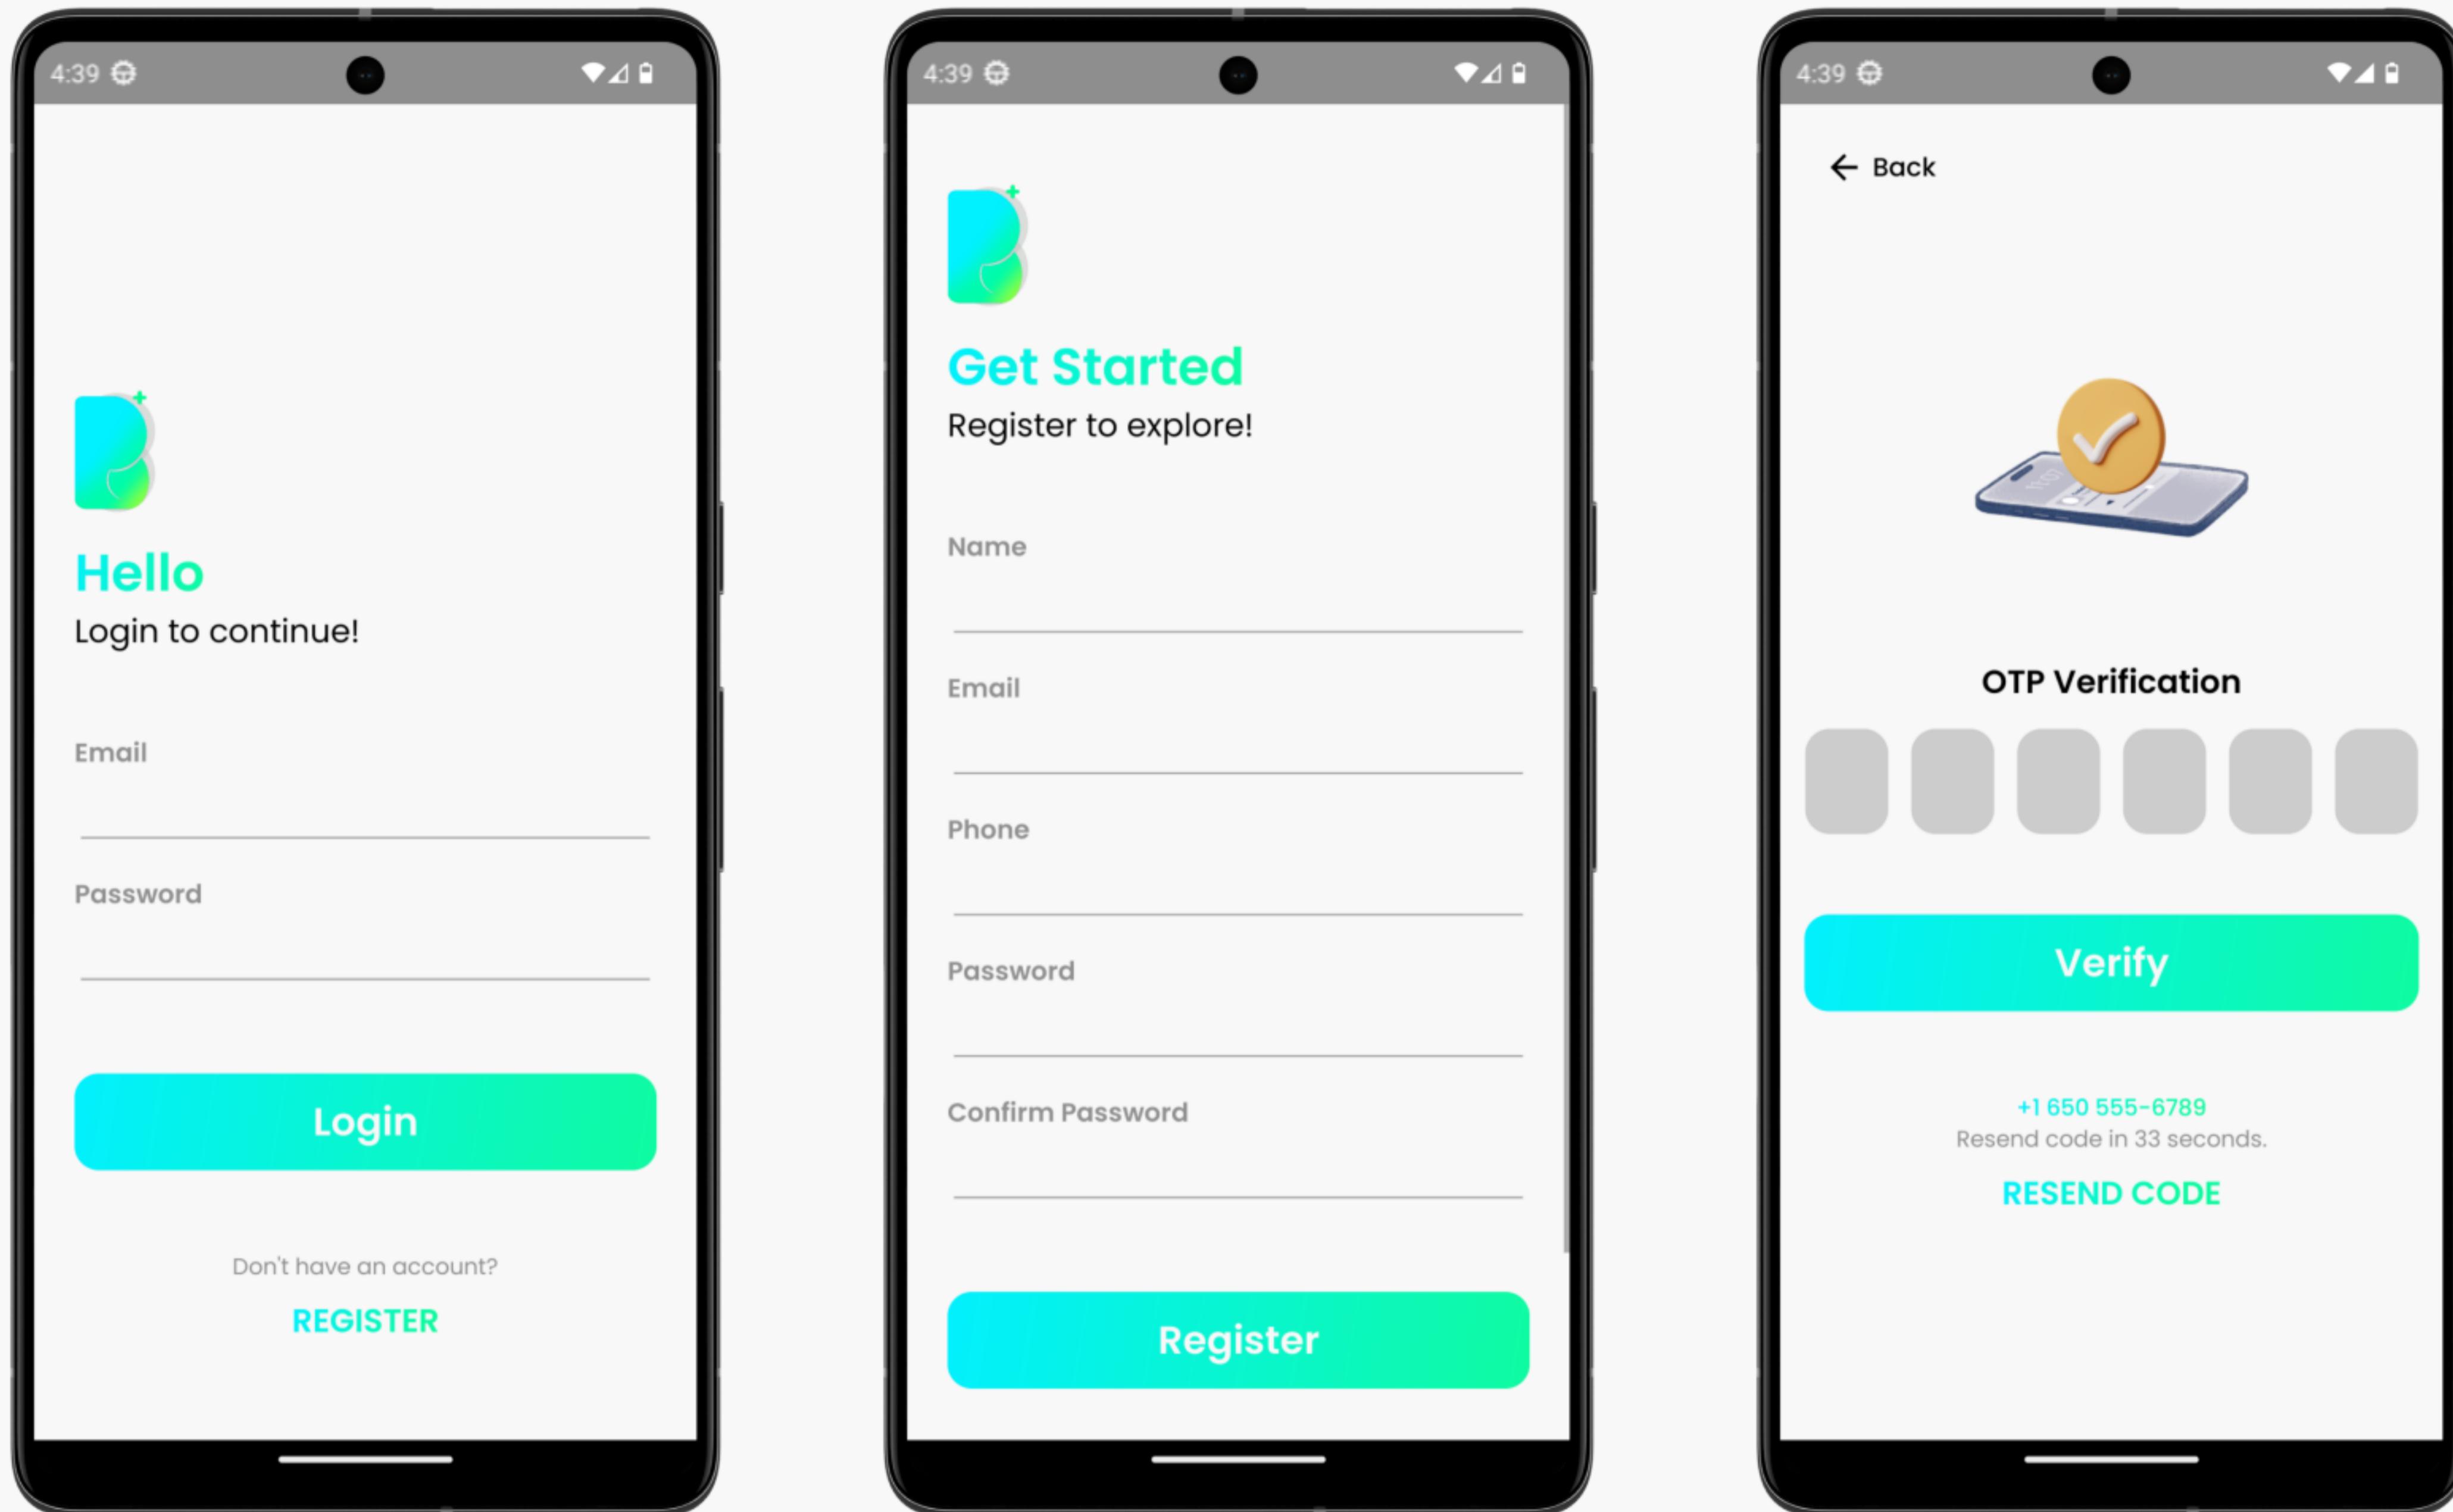

This application features a local database using **SQLITE** as required by the project assignment. In this application, I also implemented OTP verification code system using SMS Manager. All of that were coded in **Android Studio** using **Java** with **Android API 33**.

PiewPiew VR is a shooting range simulation program that allows user to train their aim virtually just like in real world. This is suitable for hunters, airsoft's, or gamers looking for fun.

This VR game requires a hand held controller to smoothly **simulate the shooting experience**. The game accept inputs from keyboard and mouse for user who don't have the complete VR controller (Using keyboard and mouse can cause lack of reality experience. All of these systems are built using **Unity** and can run on multiple platforms.
